- NodeJS, express, [sequelize](#)
- [English B1](#)

LEARNING

- Full stack course at Mate academy
- MDN Web Docs
- Learn.javascript
- Codewars
- w3schools.com

As a Front-end Developer, I see every day in the IT field as an opportunity to harness my leadership qualities while solving complex problems and taking responsibility for my actions.

During my time as a team lead in a front-end project, I successfully implemented Kanban methodologies to streamline project workflows, demonstrating my ability to guide and manage a team effectively.

My strengths lie in my willingness to step into leadership roles, make tough decisions, and take accountability for their outcomes. I take pride in these abilities, as they enable me to tackle challenges head-on and drive projects to successful completion.

WORK EXPERIENCE

Front-end developer | 2022 - present

- 500+ hours of coding
- solved 450+ development tasks, these tasks were part of real projects or a piece of a project
- developed a landing page with HTML, SCSS, BEM, JavaScript, TypeScript, React
- created an adaptive layout even without an appropriate design
- developed a server using Node.js and Express.js
- performed 60+ code reviews for other developer
- improved the code in accordance with the feedback from middle and senior developers
